

Tandou Agribusiness Services

Tandou Limited is an agribusiness listed on the Australian Stock Exchange (ASX code TAN), producing high value annual and permanent crops using leading edge technology, efficient irrigation practices and advanced agricultural techniques.

Through its team of highly trained staff who have many years of experience in agriculture, horticulture and viticulture throughout the wider Sunraysia region, Tandou is well equipped to manage every aspect of agricultural, viticultural and horticultural production, from development and establishment to complete management of properties.

Tandou is able to draw on the extensive knowledge, experience and qualifications of its team of experts.

The Tandou Advantage

- Experienced in management and delivery of turn key operations
- Farm/Orchard/Vineyard management plans – design, development, operation and reporting
- Thorough understanding of water management, government policy and water markets
- Environmental management systems – design, implementation, auditing and compliance
- Experienced in EPA compliance
- Highly experienced Board and management
- Corporate governance and compliance
- Experienced Financial professionals

Tandou offers the following services:

- Locate suitable properties including negotiation of purchase and securing of water supply
- Detailed water demand budgets including advice on irrigation systems and design
- Development of strategies to optimise crop water management
- Soil and irrigation, drainage management plan surveys
- Market research on most appropriate varieties for viability and suitability for specific growing areas
- Targeted research and trial programmes
- Tandou seeks to build long term mutually beneficial relationships

Tandou offers the following management services:

• Farm Management Services

Tandou offers agricultural, viticultural and horticultural management services to the investor, government, corporate owner or receiver who requires a high level of on-ground resourcing to maximise business profitability.

We provide qualified, experienced, management expertise and can source personnel, labour management and equipment to optimise operational efficiency and minimise property owner's overhead costs.

Full farm management from nutrient budgets and variety selection to marketing and machinery operations can also be delivered for dry-land operations.

• Water Advisory Services

Tandou is able to advise water investors and irrigators on strategies to maximise returns from water investments using tailored strategies to meet desired outcomes. These may use permanent or temporary purchases or leases of all categories of water.

Tandou can devise a detailed water demand budget including the provision of advice on irrigation systems and design. With its broad understanding of crop water use for optimum yields, Tandou can design and implement a water budgeting and reporting system to optimise production using latest technology to full capacity.

• Agronomy/Environmental Services

The Agronomic Services business unit provides specialist services for a number of large clients including water authorities, industrial, agricultural and horticultural businesses. Services offered include irrigated cereal and pima cotton production advice, contract research, agricultural, horticultural, environmental and waste water management technical advice.

Advisory services have been provided to the following crops; almonds, citrus, vines, stone fruit, potatoes, onions, wheat, barley and cotton.
